

# Cisco networking professional services

**Design. Deliver. Optimise.**

For over 30 years, we have helped organisations design and deliver Cisco networking solutions with confidence. Our Professional Services ensure network change is planned, tested, and delivered safely — minimising disruption, reducing risk, and accelerating time to value. We support customers from discovery through to go-live and handover, with clear pathways into ongoing operations and Managed Services when required.

This service is designed for organisations undertaking network change where availability, performance, and operational readiness matter.

## How customers typically engage

## Problems we help solve

Customers typically engage us where they face:

- Networks that have grown complex and difficult to operate
- Legacy infrastructure with limited resilience or visibility
- Multi-site or multi-vendor environments
- Migrations where downtime is not acceptable
- Limited assurance across WAN, cloud, or internet connectivity

## Customer outcomes

By engaging our Professional Services, customers benefit from:

- Reduced delivery risk through proven Cisco designs
- Faster time to value via standardised deployment
- Confidence at go-live through structured testing
- Improved stability, performance, and visibility
- Clear transition into operations or Managed Services

## What the service includes

Our Cisco Networking Professional Services cover the full lifecycle of network change:

- Discovery and readiness assessment
- Cisco network design (campus, WAN, wireless, SD-WAN, Meraki)
- Implementation and migration with controlled change
- Testing, acceptance, and operational readiness
- Project management delivered through our PMO

(Detailed scope is defined per engagement.)

## Optimisation & network evolution

Beyond initial delivery, our Professional Services support ongoing improvement and change, including:

- Network performance and resilience optimisation
- Technology refresh and modernisation
- Simplification of complex or multi-vendor environments
- Safe delivery of incremental change

Professional Services support change. Managed Services support the network once that change is complete.

## Transition to managed services

Where ongoing operational support is required, our Professional Services transition seamlessly into Managed Services, ensuring continuity, retained knowledge, and support aligned to a known, tested network baseline. Customers may engage Professional Services independently or as the foundation for a longer-term Managed Services partnership.

## Why boxxe?

- 30+ years as a Cisco partner
- Deep in-house Cisco expertise (40+ CCNAs, 40+ CCNPs and 4+ CCIEs)
- Dedicated labs for design and validation
- Scalable delivery across consultants, engineers, and PMs
- Continuity from pre-sales through delivery and into support

“ Professional services support change. Managed services support the network once that change is complete
