

Network

Intelligence

Introduction

The pressure on modern organisations to digitally transform and extract greater insight and intelligence from technology is relentless. Yet one enduring challenge remains: sustaining visibility and control on the lifecycle and operational health of your infrastructure assets as they expand and evolve. It's not new—and it's not going away.

Our flagship service, Network Intelligence (NI), developed in partnership with Cisco, gives organisations complete visibility of their Cisco and Meraki infrastructure. NI helps IT teams save time, reduce technical debt and maintain compliance with automated dashboards and reports.

What is Network Intelligence?

Network Intelligence is a simple yet very powerful service that gives organisations complete visibility of the lifecycle and operational health of their Cisco and Meraki infrastructure assets.

It brings together data on lifecycle, licensing, contract coverage and security vulnerabilities into one simple platform, with an easy to navigate dashboard

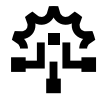

By replacing manual processes with real-time insight, NI helps IT teams save time, reduce costs and manage risk more effectively.

The headlines

- Comprehensive visibility – service enablement for your Cisco estate in less than 30 seconds
- Zero cost for active service customers
- Identify vulnerabilities and obsolete software with security insights
- Lifecycle management – spot end of life or expired contracts and entitlement gaps
- Get a five year road map to optimise your infrastructure
- Daily dashboard – up-to-date data and insights
- Monthly reporting – clear summaries for stakeholders and budget planning
- Trusted by market leading organisations including Wrexham County Borough Council

Problem(s) solved

Even the best maintained Cisco and Meraki estates can be complex to manage. Network Intelligence is a free service that simplifies these common challenges by turning raw network data into clear, actionable insight.

- **Limited visibility across multi-site and multi-architecture environments**
- **Manual, time-consuming audits and reporting**
- **Security and compliance risks from unpatched vulnerabilities**
- **Unexpected costs from expired contracts or unsupported equipment**
- **Wasted OpEx and CapEx infrastructure spend**

Benefits straight to your bottom line

Save time

Get automated reporting, replacing manual, time-consuming processes.

Save money

NI identifies unused licenses, expired contracts, unsupported hardware, energy waste and over-provisioned networking capacity.

Reduce risk

Get access to daily generated lifecycle and security alerts before issues cause downtime.

Improves planning

Our Cisco Networking expert will turn your insights into a five-year roadmap allowing you to benchmark and forecast for better budgeting in the future.

Don't just take our word for it...

We run a vast estate split across multiple remote offices, so Network Intelligence is the eyes and ears across our Cisco infrastructure. It shines a light on defects and risks that need attention and helps us avoid the build-up of technical debt. I rely on NI to ensure our infrastructure is running optimally and securely”.

Nick Wilkinson | Infrastructure Manager, Tokio Marine Kiln

User of Network Intelligence since 2015
